

# **Go-Phish**

## **An AI model to detect and mitigate Phishing emails.**

Team: Durga Srikari Maguluri, Kamini Suresh Yelamar, Naveen Putta, and Rudheer Kumar Bolla

What ?

Why ?

How ?

Where ?

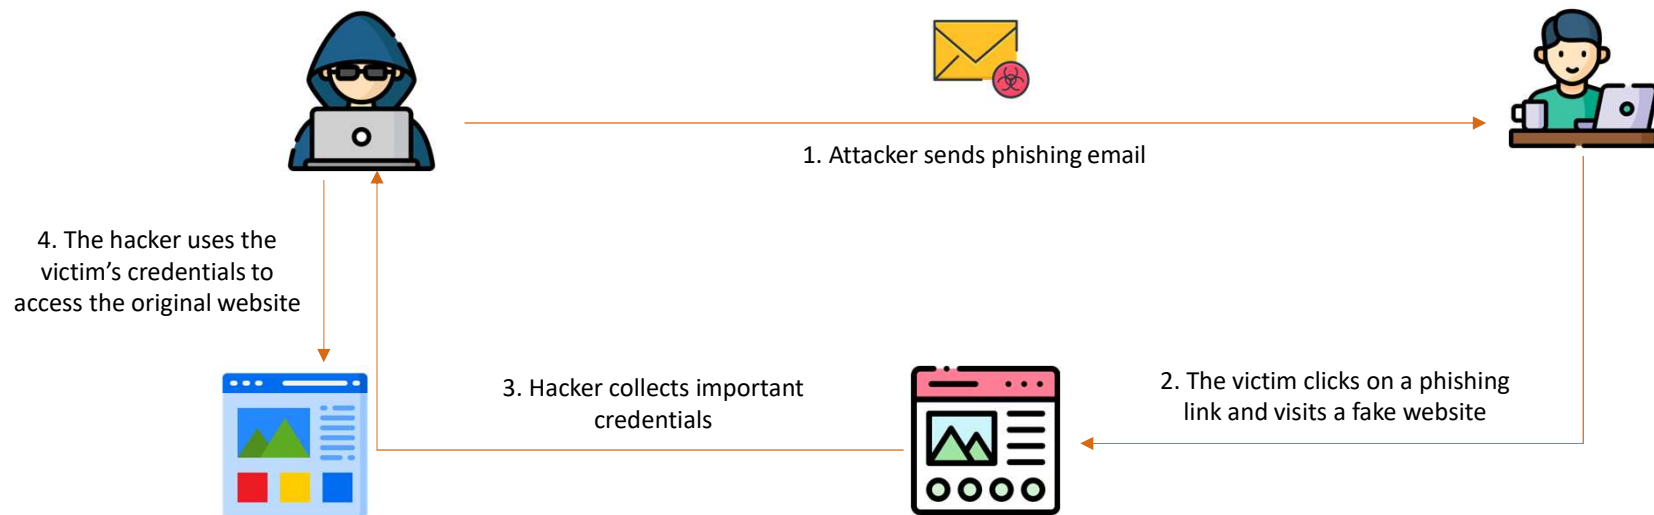

Which ?

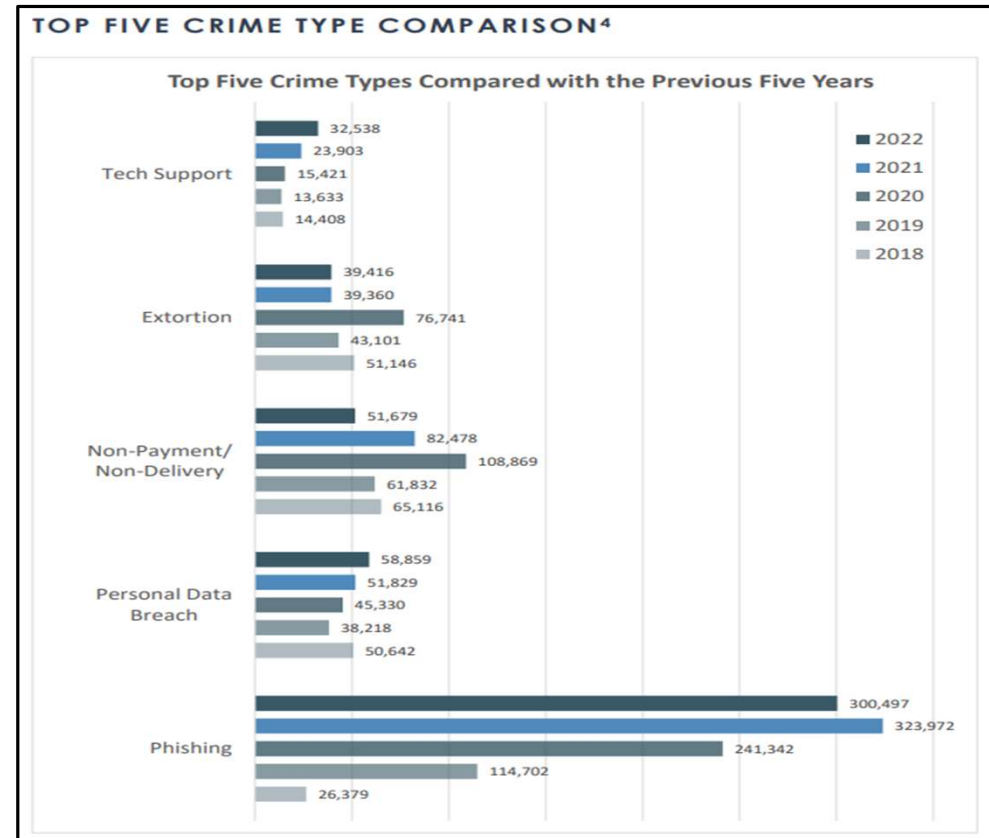

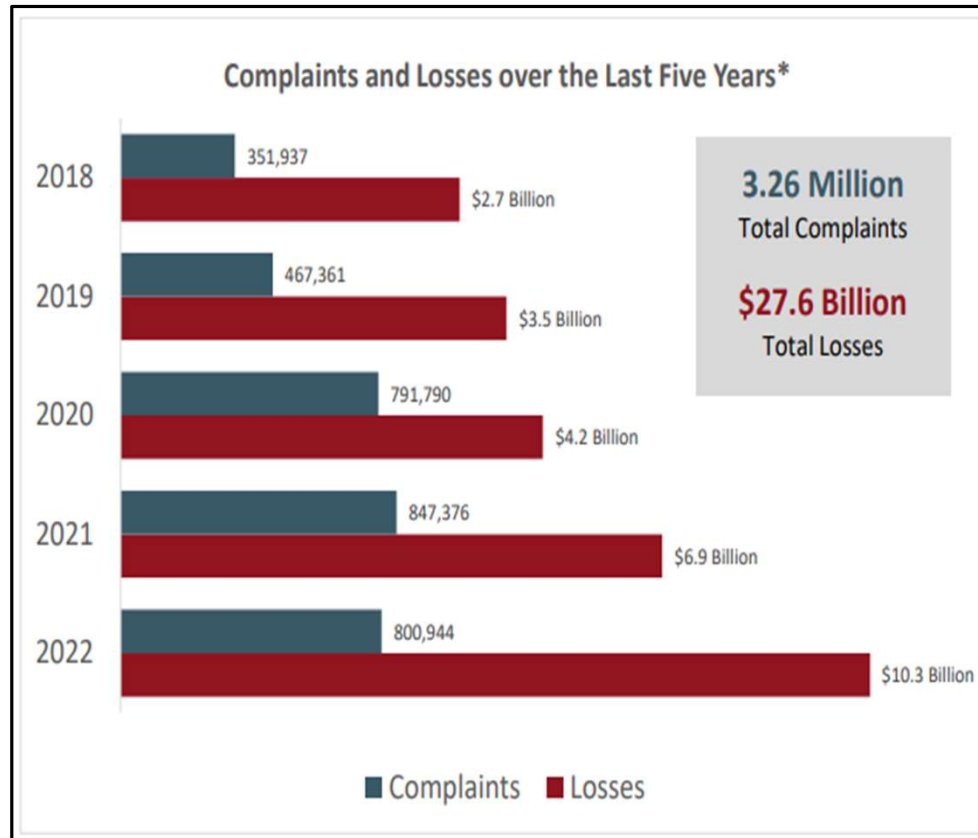

# What is Phishing? (Problem Statement)

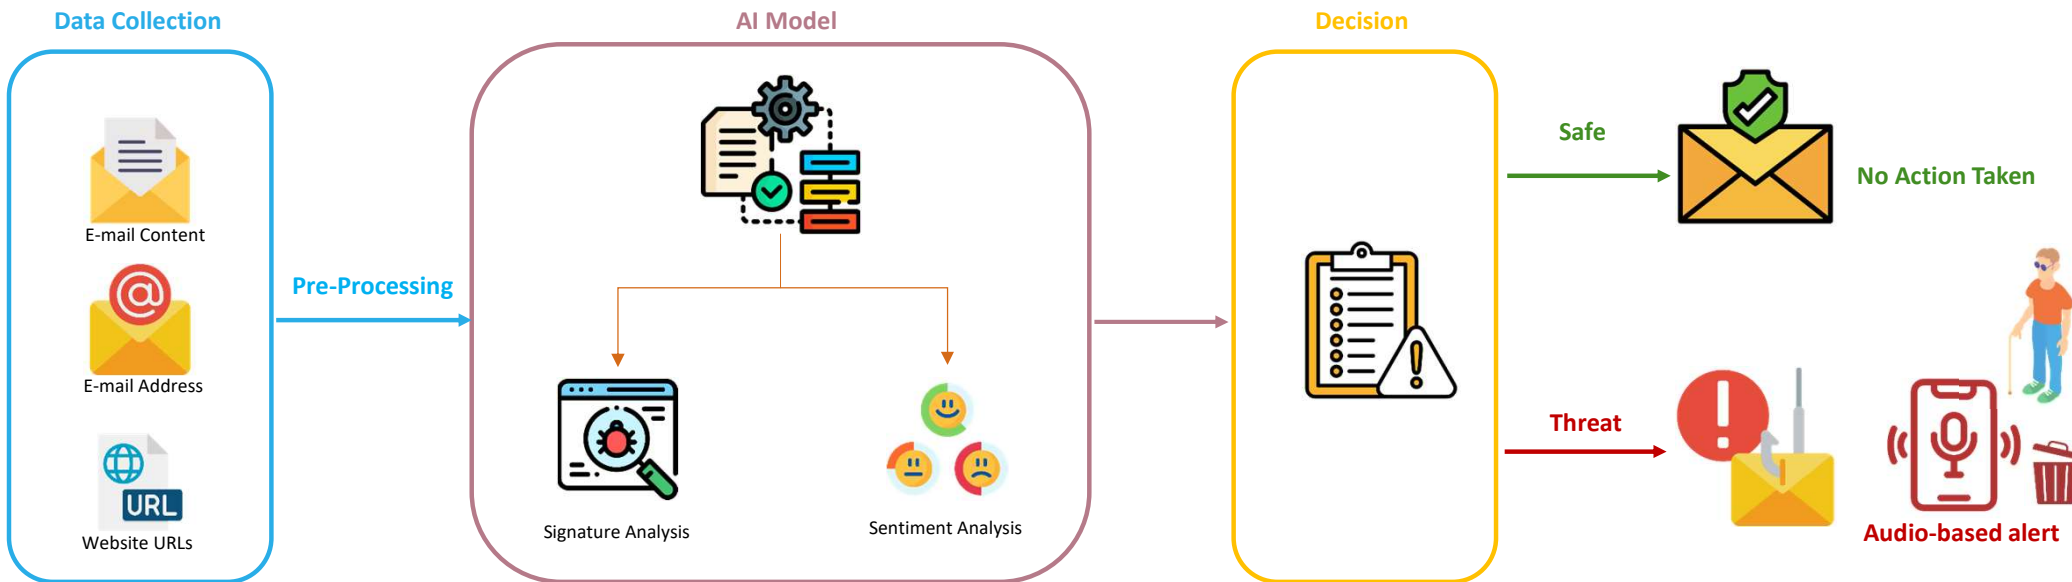

Phishing is a form of internet crime where attackers deceive people into providing their personal data through a scam process.

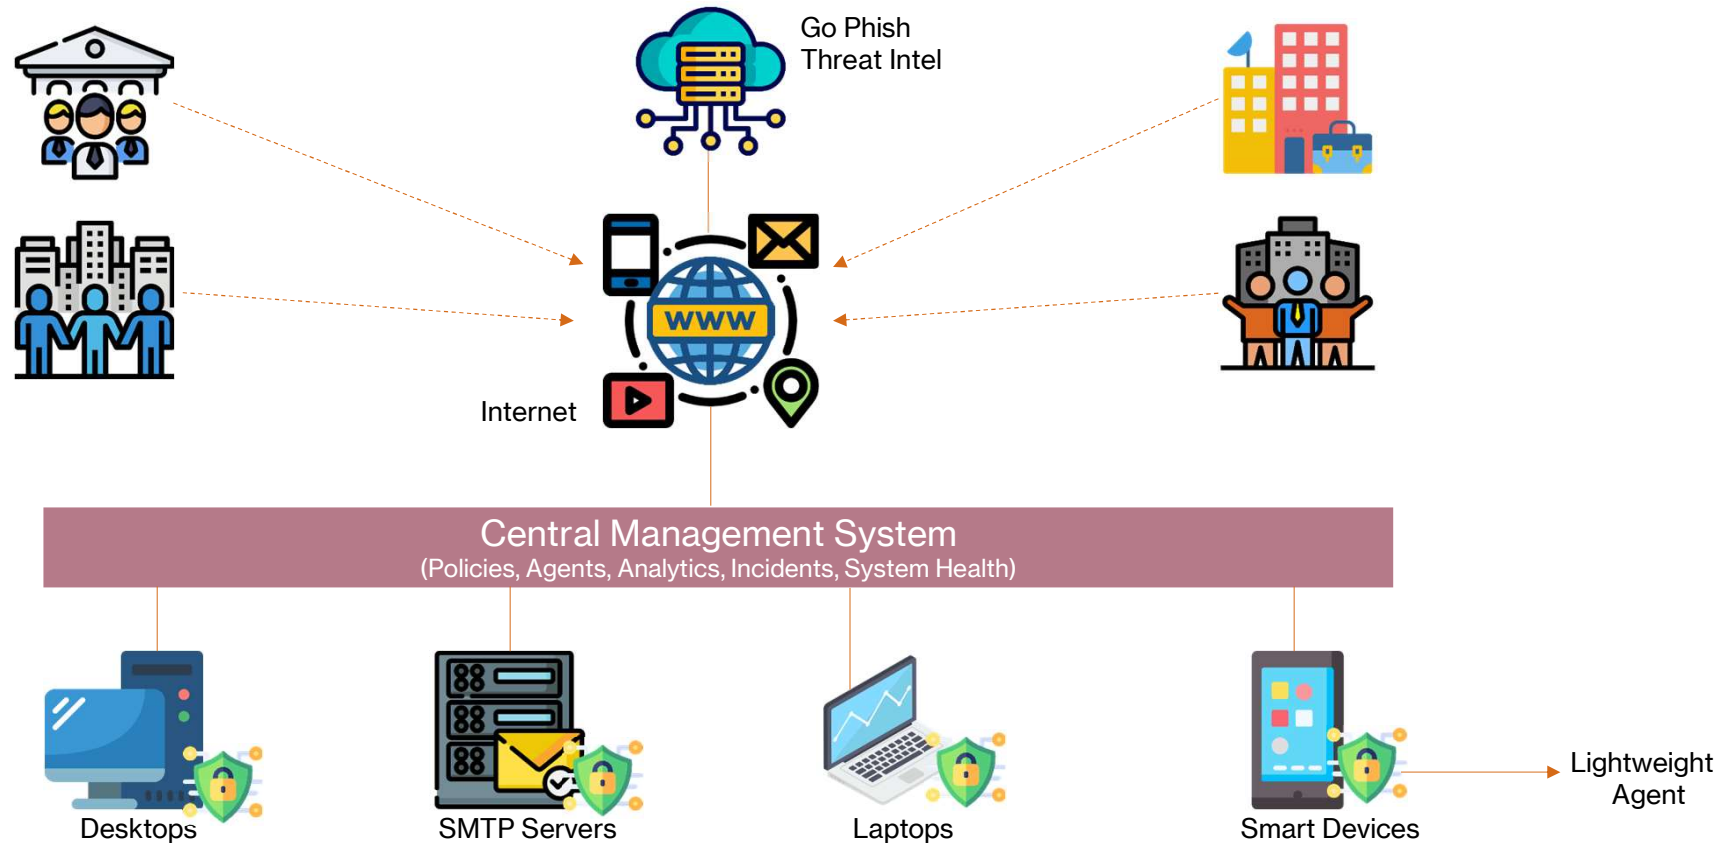

# Why is a solution needed? (Problem Statement)

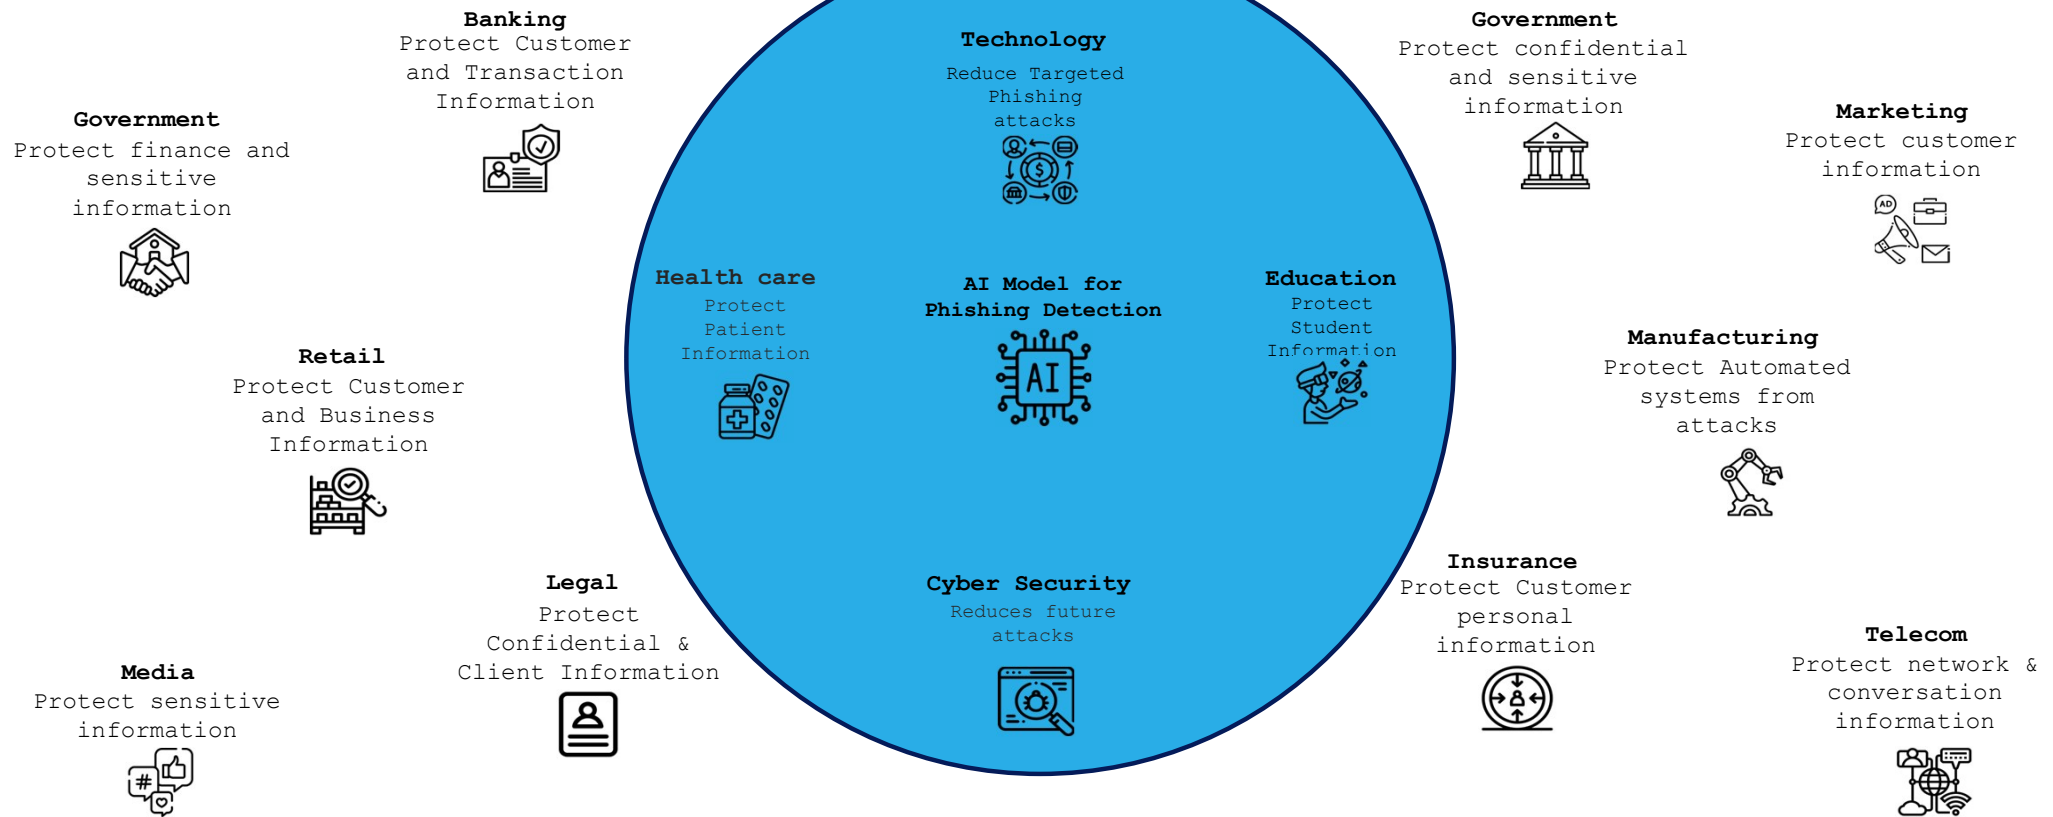

# How to solve it? (Vision for the solution)

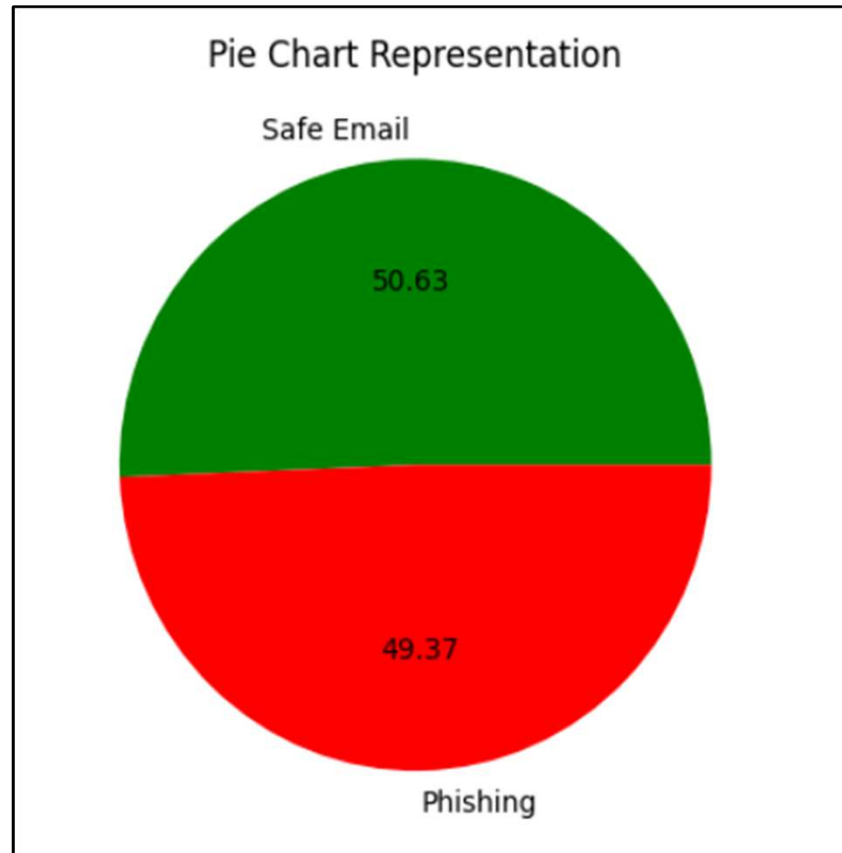

# Introducing Go-Phish (Solution Aligned with Vision)

# Where can we apply the solution?

## Which data is Collected?

# Frequency Distribution of Data

Figure: Sentence count for safe vs phishing email

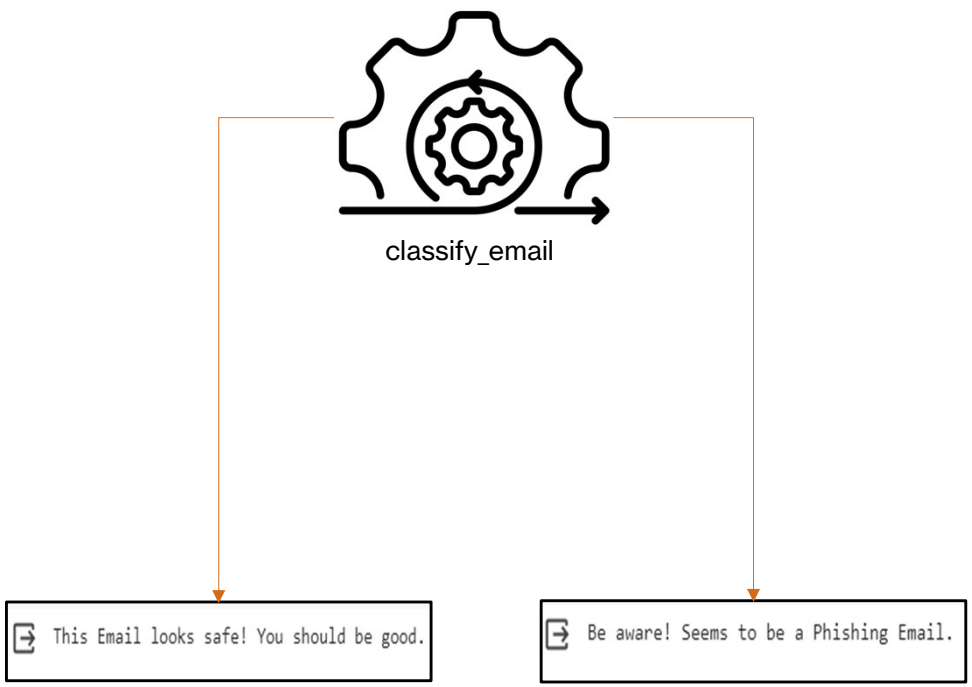

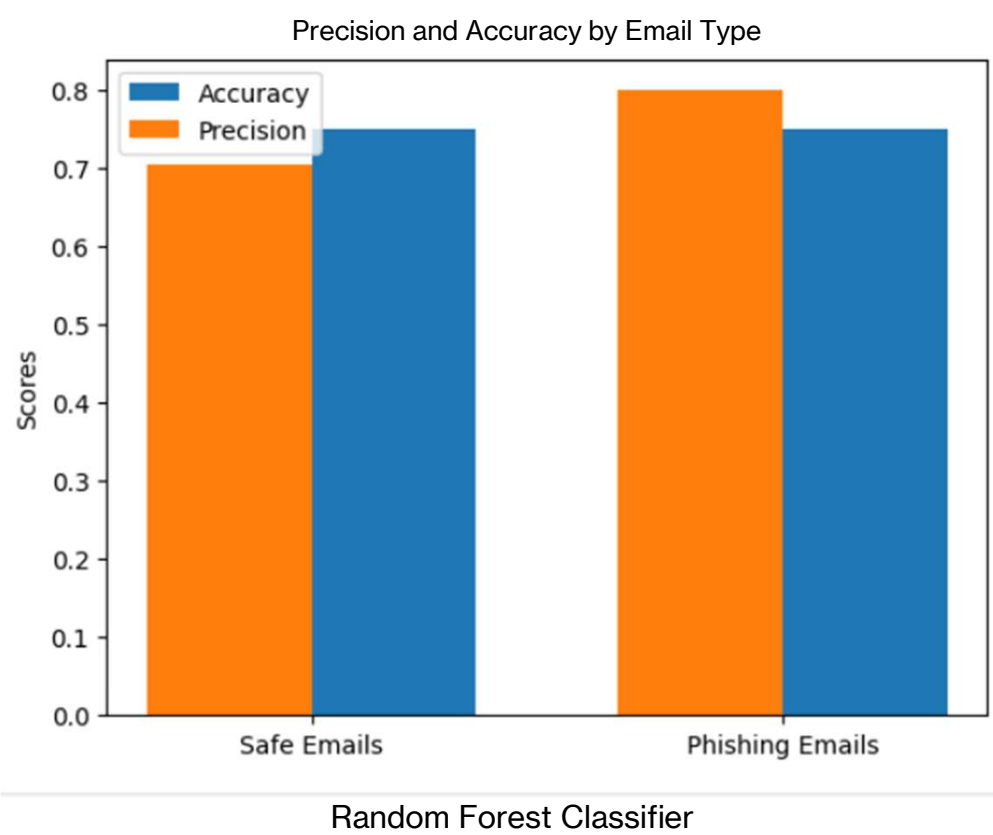

Safe    Phishing

# Observations

	Algorithm	Accuracy	Precision	Recall	F1-Score
2	DT	0.75000	0.795455	0.75000	0.744048
3	RF	0.78125	0.793899	0.78125	0.780609
4	SVM	0.62500	0.791667	0.62500	0.576299
1	NB	0.75000	0.755882	0.75000	0.750000
0	KNN	0.71875	0.718502	0.71875	0.717919

# Conclusion

**Thank You!**
